# Server Architecture and Good-practice

SEMINAR

This short seminar aims at introducing to all the group the new architecture of our server and to give a set of good-practice rules for a correct usage of this common resource. First a general overview of the server structure is presented. It is followed by a short tutorial which briefly explains how to correctly launch simulations on the various nodes and how to safely store you data on the different locations available on the server. Finally upcoming features of the server will be discussed.
