

# **Università degli Studi di Pavia**

Dipartimento di Ingegneria Civile e Architettura

Corso di Laurea in Bioingegneria

## **3D Printing per la pianificazione del trattamento endovascolare dell' auricola atriale sinistra**

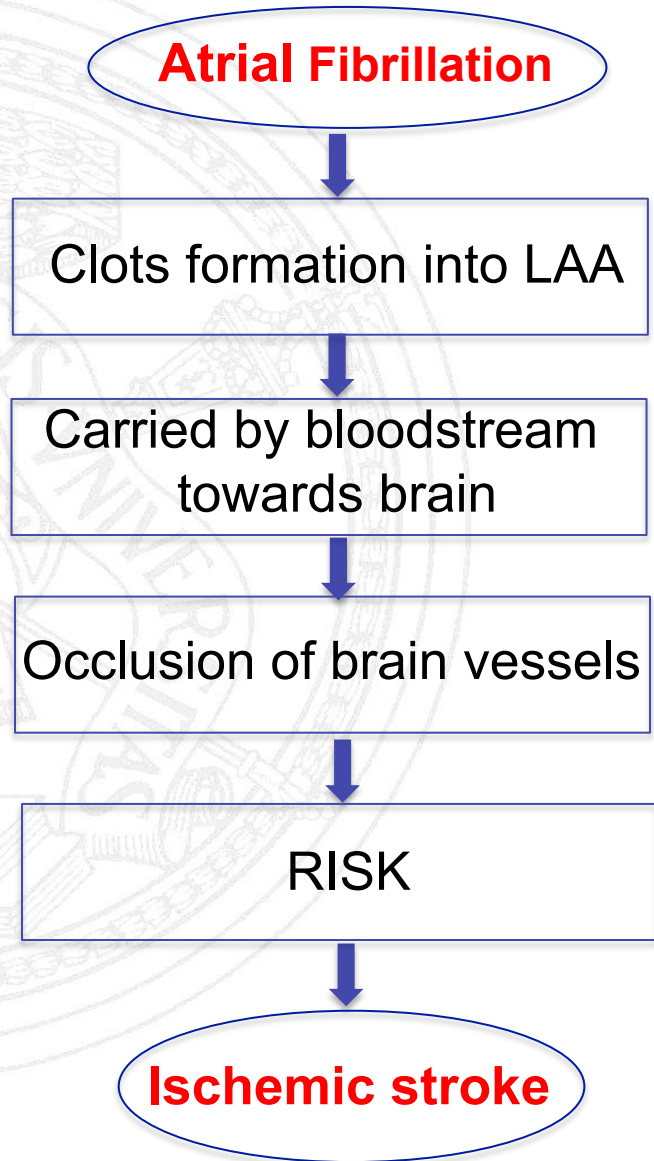

Candidato: **Roberta Maria Lorenzi**

Relatore: **Prof. F. Auricchio**

Ringraziamenti: **Dott. M. Conti**

Anno Accademico: 2014/2015

# Clinical Problem: Ischemic Stroke

## Pharmacological Treatment

Anticoagulant Oral Therapy

TAO

Warfarin

- Disadvantages:
- Strict control of therapeutic range
  - Risk of haemorrhage

## Endovascular Treatment

Choice for  
non suitable TAO  
people

# LAA Endovascular Treatment

## Measurement

Taken with

TEE

MDCT

**3D PRINTING** → **Patient's specific model**

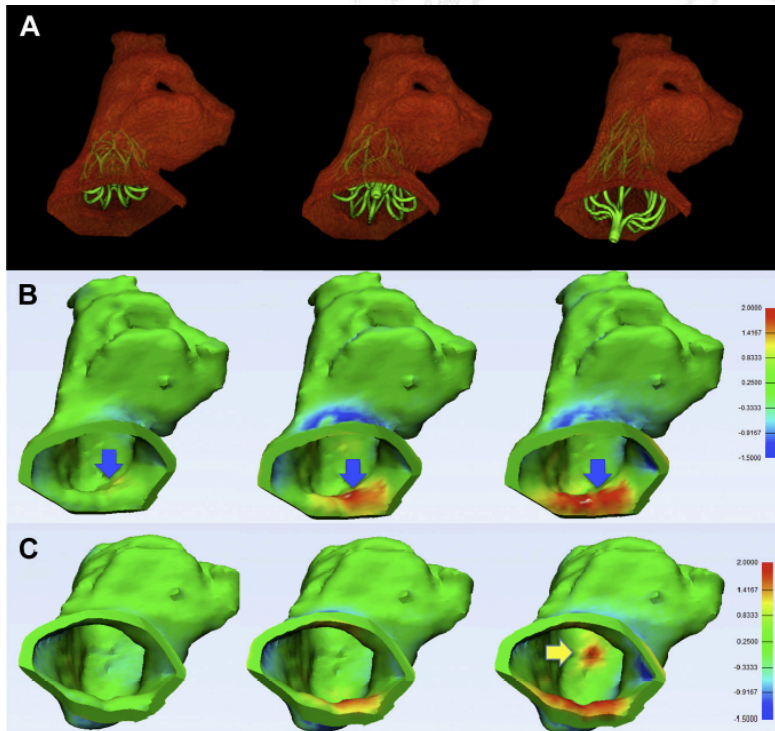

# 3D Printing – A Study Case from Literature

**Medical Case:** 74-year old man, ischemic cardiomyopathy, intolerance of anticoagulation

**Procedural plan:** Pre-procedural **imaging** and **employment of 3D printing**

Imaging → TEE and MDCT → Measurement → Optimal device : 21 mm

3D Printed model → Segmentation > STL > 3D printing > 3D rubber-like LAA model

Placement of different sized devices (21mm, 24mm, 27mm)

Simulation of atrial mechanical properties

Re imaging with CT

Calculus of anatomical deformation

Optimal device :  
24 mm

**Result :** 3D printing allows  
the choice of the optimal device  
and avoids device embolization

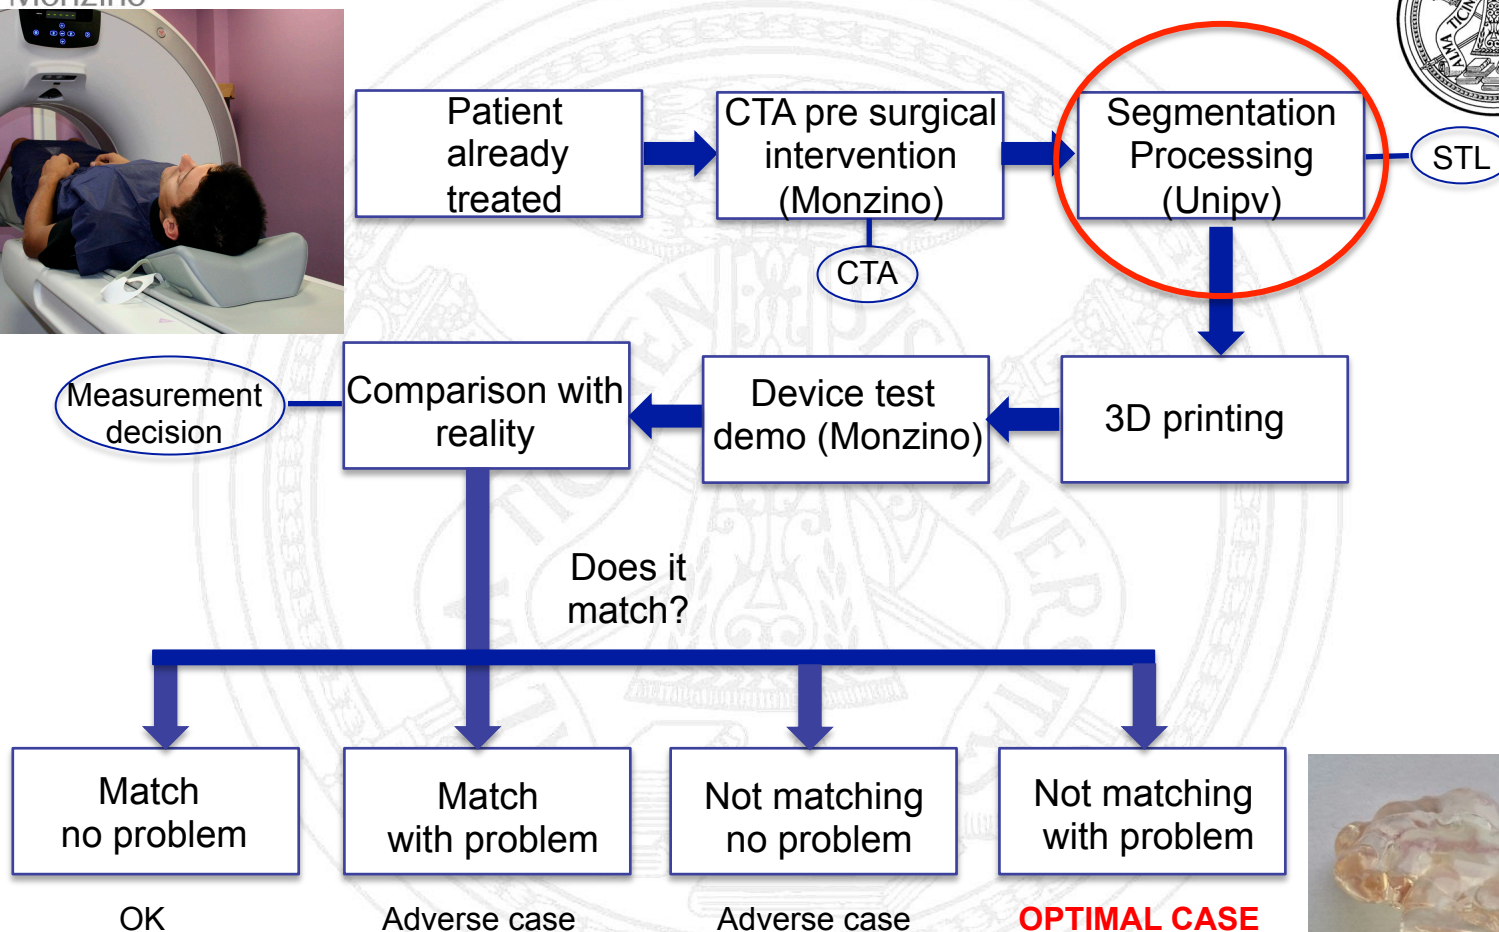

Centro Cardiologico  
Monzino

?

  
**CareTronik**  
solutions for life

**OPTIMAL CASE**  
Evaluate if  
printing support  
can fix the  
problem

# Segmentation Flow

## Visual Analysis

## Contrast Adjustment

highlight LAA by  
changing red line shape

Selection of  
ROI

# Segmentation Flow (cont.)

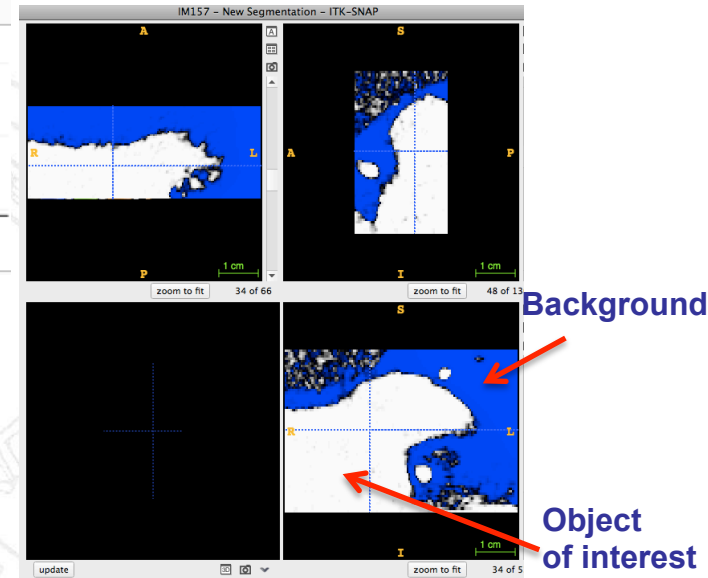

## Thresholding

Distinction between background and foreground region (Object of interest)

Intensity  $\left\{ \begin{array}{l} \text{Background} = -1 \\ \text{Borderline} = 0 \\ \text{Foreground} = +1 \end{array} \right.$

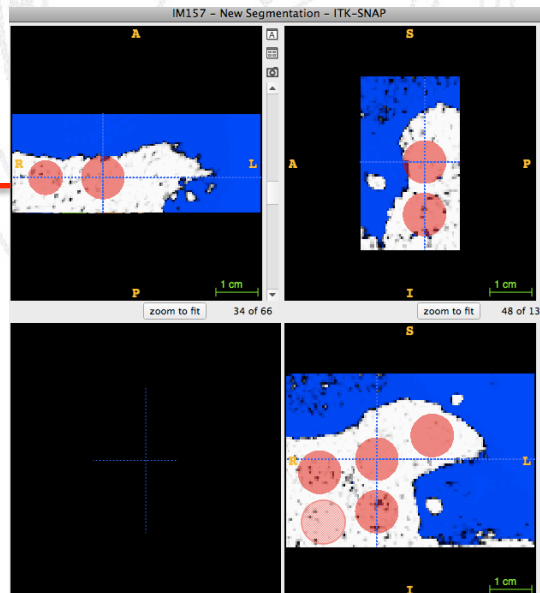

Lower and Upper threshold adjustment applying Band Pass Filter

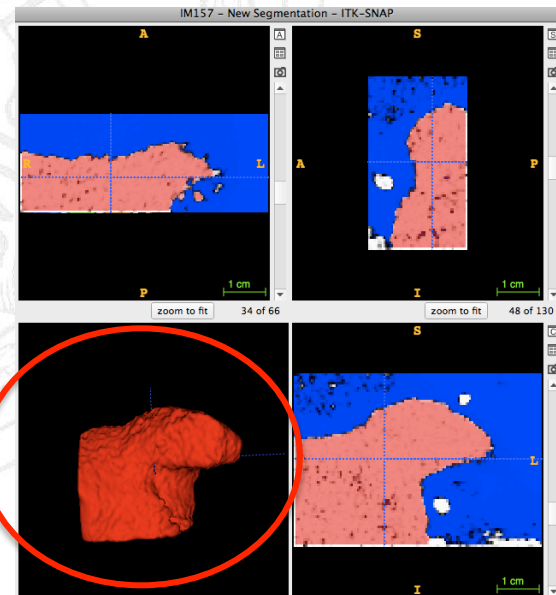

## Automatic Segmentation

Region Competition  
snake initialisation with *bubbles*

Increase where intensity = +1

Decrease where intensity = -1

Output of segmentation is a .STL file

# Segmentation flow: Noisy Images

If bad quality is due to noise ?  $\rightarrow$  Pre-Processing

$N_{bad} = 7 \rightarrow N_{noise} = 3$

*Salt and pepper  
noise*

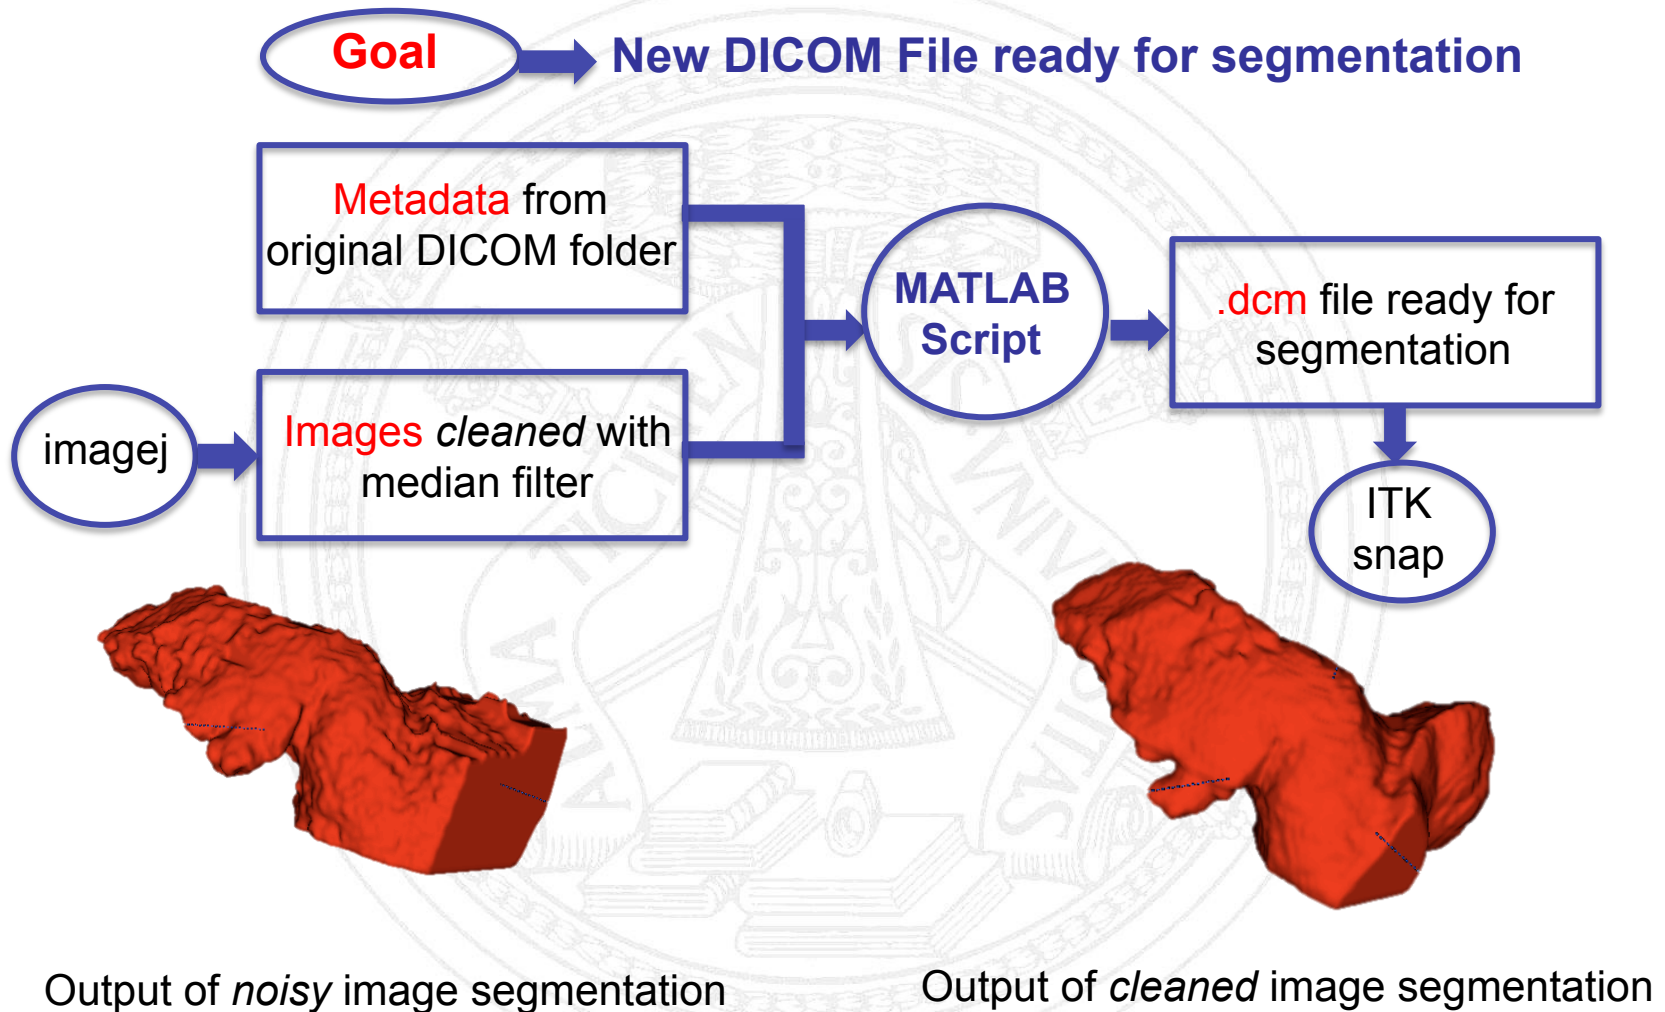

Median Filter

Noise decrease but  
loss of details

# Segmentation flow: Noisy Images (cont.)

**Better image quality → Better segmentation**

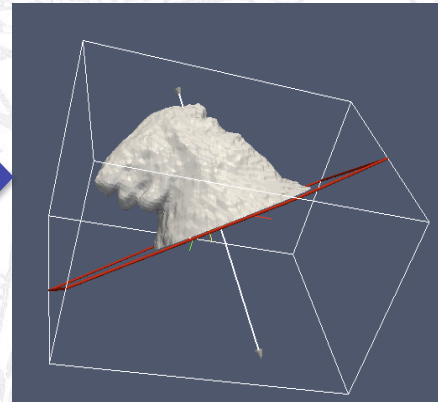

Cropping

Goal

Printing plate fitting without dimension re-scaled

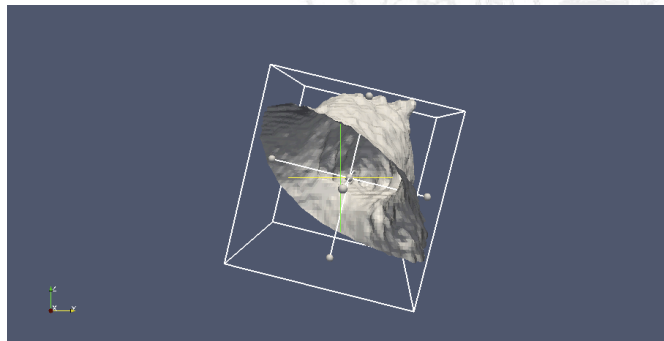

Filter Clip

Interest in LAA and its entrance

Reduce surface dimension

Filter Transform

Fit printing plate dimension

$\left\{ \begin{array}{l} x = 60 \text{ mm} \\ y = 45 \text{ mm} \\ z = 100 \text{ mm} \end{array} \right.$

**Smoothing**

**Goal**

**Round the edges**

**Hollowing**

**Goal**

**Thickness (1 mm) to get a closed volume**

Inside creation  
of the object

Re-meshing

# 3D Printing: Printer

3D printer: **Form 2** formlabs 

*Ink:*  
**Polymeric Resin**

**Resin Wiper**  
Improve print consistency  
by removing any  
particulates from the build  
area

**Heated Tank**  
Keep resin to a  
Consistent temperature  
(35°C)

**Touch screen  
interface**

**How does it work?**

# 3D Printing: Technique

## SLA: StereoLithography Apparatus

**Optical Engine:** 250 mW precision laser guided by custom-built galvanometers

Laser and photopolymer resin → Consolidation

*N printed = 14 (11 good quality + 3 pre-processed noisy images)*

**Segmentation, Post – Processing and 3D Printing**

**PATIENT – SPECIFIC MODEL**

# Conclusion: Future Prospect

## Statistics:

F.A. effect      World → 2% of people (6 million in Europe)

Correlation      Age ≥ 60 years old → 4%

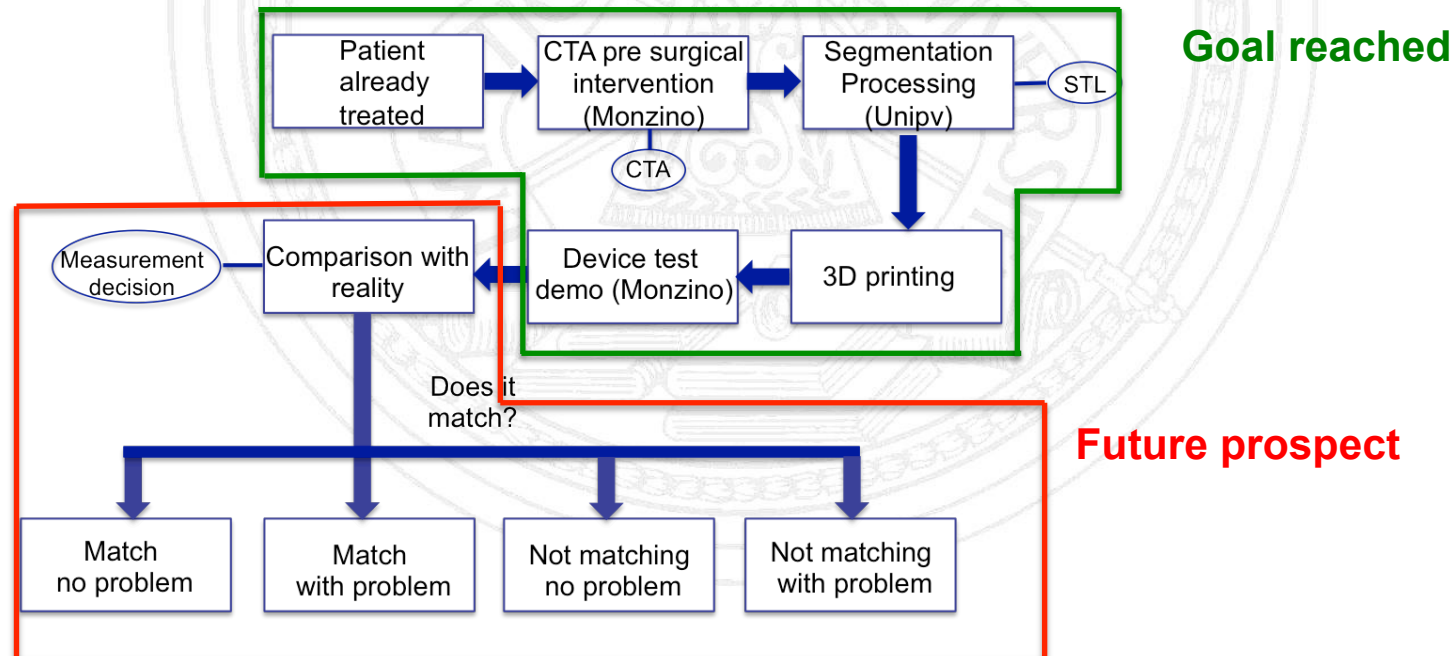

with Age

Age ≥ 80 years old → 9%

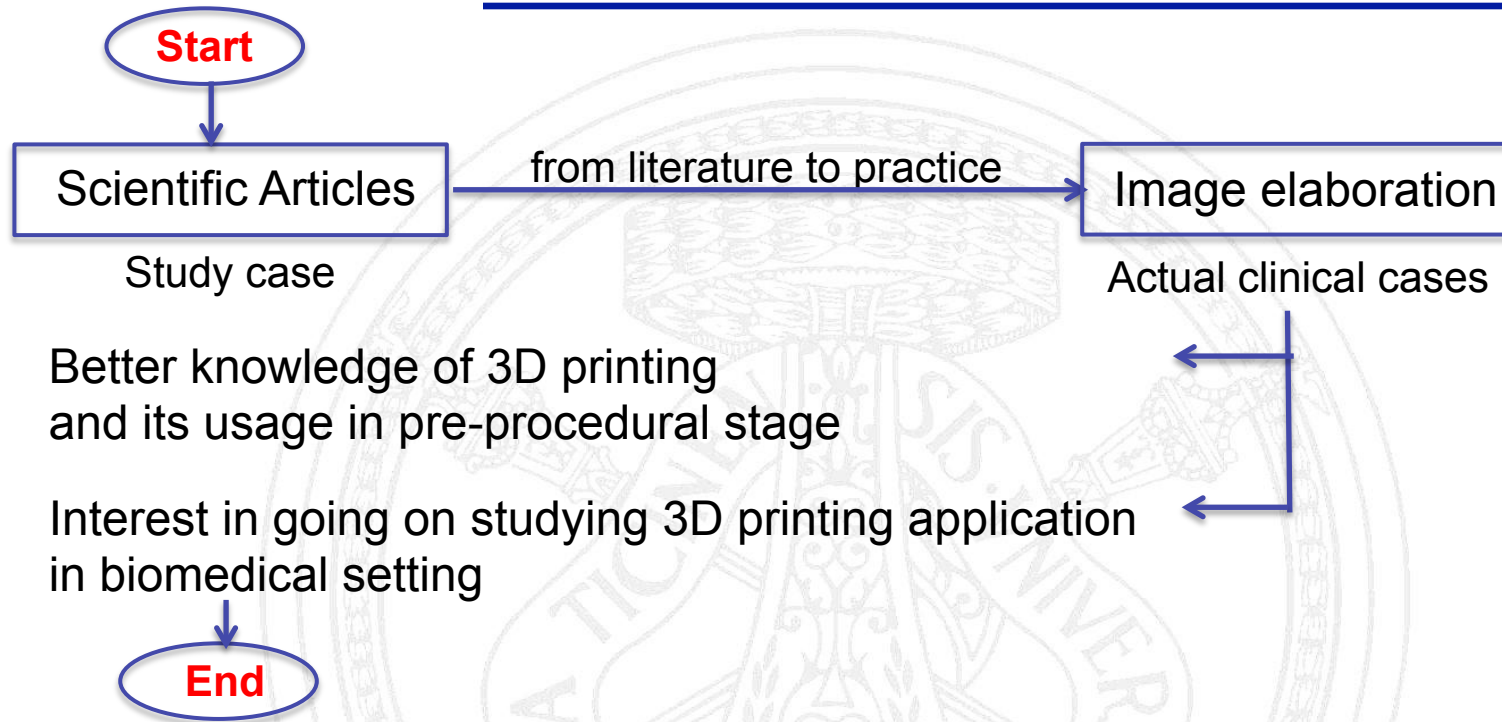

Exponential trend

## Endovascular treatment:

Nowadays studies : Residual leaks in 10% of patients → How to improve this result?

# Conclusion: Personal Growth

**...GRAZIE PER  
L'ATTENZIONE !!!**

Un ringraziamento particolare al Dott. M. Conti

**... Some more information ...**

As for noisy image:

**Smoothing Filter**

Delete the sudden transitions of luminance

Reduced noise

Details loss

◆ Mean Filter

◆ Gaussian Filter

◆ Median Filter

# Median filter

## Feature:

Working well to remove impulsive noise

Less image alteration than other smoothing filters

**Parameter:** Neighbourhood Radius

Original Intensities

|   |    |   |
|---|----|---|
| 3 | 3  | 4 |
| 4 | 87 | 4 |
| 4 | 5  | 5 |

Sorted Pixel values: 3, 3, 4, 4, 4, 4, 5, 5, 87

Median filtered value: 4

## Type of mask

Mask used:  
square3X3

## 1. Metadata

```
%% Carico le Dicom originali

cd(dirOrig);
fn='IM';

%Dati relativi alla prima dicom
fn_tmp=[fn num2str(0)];
%fn_tmp=IM(i) i=[0 n]
dh(1)=dicominfo(fn_tmp);

ImgOrig=zeros(dh(1).Width,dh(1).Height,n+1);
ImgOrig(:,:,1) = dicomread(fn_tmp);

%Ciclo per aggiornare
%i metadata e le immagini
for i=1:n
    fn_tmp=[fn num2str(i)];

    %salvo i metadata nella matrice
    dh(i+1)=dicominfo(fn_tmp);

    ImgOrig(:,:,i+1) = dicomread(fn_tmp);
end

cd(wkdir); %torno alla wkdir
```

## 2. Pre-processed Images

```
%% Carico le immagini ripulite

cd(dirMod); %cambio directory
ImgMod=zeros(dh(1).Width,dh(1).Height,n+1);

%prima immagine modificata
fn_tmp=[fn num2str(0) '.tif'];

ImgMod(:,:,1) = imread(fn_tmp);

%Ciclo che riempie la matrice con tutte
%le immagini modificate
for i=1:n
    fn_tmp=[fn num2str(i) '.tif'];
    ImgMod(:,:,i+1) = imread(fn_tmp);
end

%plot della prima slice
figure(2)
subplot(1,2,1)
imagesc(ImgOrig(:,:,1))
subplot(1,2,2)
imagesc(ImgMod(:,:,1))
colormap gray

cd(wkdir); %torno alla wkdir
```

## 3. New File

```
%% Scrittura del nuovo file

cd('New');

fn_tmp=[fn num2str(0) '.dcm'];

for i=1:n

    fn_tmp=[fn num2str(i) '.dcm'];

    dicomwrite(uint16(ImgMod(:,:,i)),fn_tmp,dh(i),'CreateMode','copy');
    %scrivo un nuovo file dove unisco le immagini modificate e i metadata
    %recuperati da immagini originali
end
```

# Form 2 Formlab: Specification

Build volume: 145x145x175

Layer thickness: 25-100 micros

Laser spot size: 140 micros

Laser power: 250 mW

Automated Resin system

Level sensing: Tank automatically filled

Cartridge ID chips: keep track of resin supplies

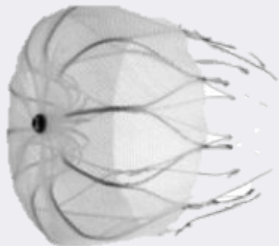

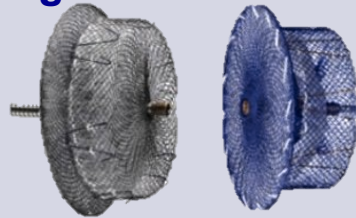

Open Mode: experiment with 3<sup>rd</sup> party resins

Controls

Touchscreen interface

Wireless connectivity
